

BASIC ASSIGNMENT 5
CORE METHODS IN EDUCATIONAL DATA MINING
PROFESSOR BAKER
SOCIAL NETWORK ANALYSIS
DUE 10AM, THURSDAY OCTOBER 29

In this assignment, I've taken the data from the discussion forums during week 1 of "Big Data and Education", taught on Coursera in Fall 2013. This data was pulled from the discussion forum, which was publicly accessible to any student taking the course (and to anyone who enrolls in the course today, even though the course ended almost two years ago).

The data sheet has four columns: the post ID, the poster's (deidentified) ID, the thread the post was in, and which post this post was a response to.

You can complete this assignment using any social network analysis tool (people tend to like Gephi), or in Microsoft Excel, or any other tool you like.

The assignment is available within TutorShop.
