CORE METHODS IN EDUCATIONAL DATA MINING
SPRING 2017
BASIC ASSIGNMENT 1: CLUSTERING

In this assignment, you need to conduct a set of cluster analyses on data file
http://www.columbia.edu/~rsb2162/EDM2014/asgn7-clustering.csv

This is a synthetic data set that will illustrate some ideas around cluster analysis.

You should complete this assignment in RapidMiner 5.3.

This assignment is due at noon, January 25, 2015.

You can currently find the assignment in TutorShop.

You should have received a TutorShop login by email.
If you have not yet received a TutorShop login, please email me.

Remember the post questions on this class's Canvas discussion forum, rather than emailing me or using
the BDE/EdX forums.

Finally, if you find this hard, DON'T PANIC. You will get this. RapidMiner has a bit of a learning curve, but
it is not that hard to learn to use it even if you have never programmed before. Lots of students have
figured it out in past semesters; it just takes a little time.
