

BASIC ASSIGNMENT 2
CORE METHODS IN EDUCATIONAL DATA MINING
PROFESSOR RYAN S. BAKER

DUE VIA ASSISTMENTS SEPTEMBER 25, 2023, 1159pm, EASTERN STANDARD TIME

In this assignment, you will need to apply a set of metrics to two different data sets: one for classification and one for regression.

These are not real data sets, but are simulated data, generated for the purpose of this assignment.

You should complete this activity in ASSISTments. You can use any tool you want to complete this assignment. This includes Microsoft Excel, Google Sheets, a statistical or data mining package of your choice, or other tools available on the internet. However, the hints will be for Python.

Final note: If ASSISTments displays check marks and X's on the left panel of the assignment, or a performance bar on the bottom, don't worry. **It is OK to ask for hints and make errors. If you complete the assignment, you will receive full credit.**
